Overview

by [Simon Monk](#)

Stepper motors fall somewhere in between a regular DC motor and a servo motor. They have the advantage that they can be positioned accurately, moved forward or backwards one 'step' at a time, but they can also rotate continuously.

In this lesson you will learn how to control a stepper motor using your Arduino and the same L293D motor control chip that you used with the DC motor in lesson 15.

PARTS

Last updated on 2015-05-04 at 04:27:11 PM Published on 2012-12-20 at 10:29:07 AM

Small Reduction Stepper Motor - 5VDC 32-Step 1/16 Gearing

\$4.95 [Add To Cart](#)

Dual H-Bridge Motor Driver for DC or Steppers - 600mA - L293D

\$2.95 [Add To Cart](#)

Premium Male/Male Jumper Wires - 40 x 6" (150mm)

premium male/male jumper wires - 40 x 0.1 (1.50mm)
\$3.95 [Add To Cart](#)

Half-size breadboard
\$5.00 [Add To Cart](#)

Arduino Uno R3 (Atmega328 - assembled)
\$24.95 [Add To Cart](#)
[ADD ALL TO CART](#)
